Pet & Rendering

Italgelatine offers a range of products exclusively for *dogs, cats, horses*, and in general for all our animal friends.

The main products are gelatine, hydrolysed collagen, pork fat, and protein flours.

Gelatine and protein flours help to increase the protein content of pet food.

Research into animal feeding has established that hydrolysed collagen is an indispensable substance for the health of our four-legged friends, because it helps them to combat the wearing down of bones and joints, and to maintain healthy and shiny fur.

In addition, gelatine, together with protein flours, help to increase the protein content of pet food.

Another important use of gelatine in the world of pet food is the **capacity in stabilizing wet food stuffs**, as it reduces the quantity of free water, leading to an increase in stability and quality of the end product.
